Project Guardian

Executive Briefing — Strategic Acquisition Package

Prepared by Joe Budds, Founder & CEO
2026-04-19 · Single-Recipient Priority Review

CONFIDENTIAL — FIRST-LOOK WINDOW

The Ghost Network

ARCHITECTURE

Device Sovereignty Topology

HOUSEHOLD DEVICES

- HomePod
- Apple TV
- Smart bulbs (multi-brand)
- Cameras & doorbell
- Thermostat
- Ceiling fans
- Router / Matter hub

VENDOR CLOUDS

- ✗ Apple iCloud
- ✗ Google Home
- ✗ Amazon
- ✗ Samsung
- ✗ Ring
- ✗ Tuya OEM
- ✗ Generic

Every smart device on the home network — invisible to its vendor. Single node. Whole-home coverage.

NARRATIVE BRIEF

Every smart device in the American home talks to its manufacturer — constantly. Telemetry, usage data, voice samples, location, device fingerprints. The homeowner has no visibility into what leaves, and no way to stop it without breaking the device.

Guardian makes every device on the network **invisible** to its vendor — without breaking functionality. We call this the Ghost Network. One SavvyMesh™ node, one install, whole-home coverage. The user keeps every feature they paid for. The vendors just stop hearing them.

Telemetry Kill

REFERENCE HOUSEHOLD · 7-DAY BLOCKED REQUESTS

90%+

BLOCK RATE ON VENDOR
TELEMETRY & AD TRAFFIC

Internal testing on reference household. Full methodology and per-vendor breakdown provided under NDA.

NARRATIVE BRIEF

This isn't theoretical. On a reference household running Guardian for seven days, more than nine out of every ten data-harvest requests were blocked at the network layer — before leaving the premises. GuardDNS™ catches them at resolution; SavvyMesh™ handles the encrypted payload attempts that bypass DNS.

The homeowner doesn't install anything on the device. No per-brand app. No consent friction. The device works exactly as it did yesterday — it just stops phoning home.

For an ecosystem partner, this becomes **the privacy layer your customers have been asking for** — delivered through hardware you already sell.

The Physical Intercept

POWERCORE RELAY™ · SHALLOW IN-WALL

PowerCore Relay™

Shallow depth · Wago-style lever connectors
· Status LED · Network-addressable

- Inline on hot wire to any outlet, switch, or appliance feed
- Guardian detects device lockup (no heartbeat / no DNS / offline)
- Fires configurable 5–60 second power cycle
- Device reboots. Support ticket never gets written.

DAY 12 — 2:47 AM: Customer's HomePod unresponsive. Guardian detects. Fires PowerCore Relay™. **15-second power cycle.** Device restored. No truck roll. No ticket. No customer rage.

The only home platform that can physically reboot a stuck device without human intervention.

NARRATIVE BRIEF

Every smart-home platform in the market today has the same hidden failure mode: when a device locks up, the only fix is for a human to walk to it and unplug it. Apple HomePods, Nest thermostats, Ring cameras, any router, any Matter bulb — they all share this failure.

PowerCore Relay™ is a **\$1-class component** (BOM, integrated). Three revenue paths open from one part:

- **Integrated at manufacture** — +\$3 MSRP; every partner SKU ships "Guardian-Ready."
- **Retrofit module** — \$19.99–\$24.99 consumer SKU for existing devices.
- **Third tier** — reserved. Disclosed under LOI.

No competing platform ships this. First partner to integrate owns the category.

The Steel Deal

UNIT ECONOMICS

Revenue Stream	Unit / MRR
PowerCore Integrated (Tier 1)	+\$3.00 / device
PowerCore Retrofit (Tier 2)	\$19.99–\$24.99 SKU
Guardian Subscription	\$10.00 / month / household
Reserved Tier (Tier 3)	Multi-\$M / year (LOI)

DEAL TERMS

Acquisition floor: \$10,000,000 — entry figure, below independent category valuation

Window: Steel Deal priority first-look — one partner, this cycle

LOI + deposit unlocks: Full Sovereignty Vault (technical architecture, provisional IP, reference-household data, Tier 3 disclosure)

Close target: 30 days from LOI

NARRATIVE BRIEF

The Steel Deal has three parts.

One — the floor is ten million. Independent category-comparable valuations place this platform in the billions. The floor reflects my preference for speed and for the right partner, not the market.

Two — the first partner to move owns this category. I'm giving one company a priority first-look window. The second company that calls learns it's been placed.

Three — the full technical package, including the reserved third product tier, unlocks under signed LOI and deposit. Nothing substantive in this deck is a promise I can't back; nothing in the Sovereignty Vault is in this deck.

You get the Steel.
I get to retire.
Everybody wins.
